Practice Test - Domain 6 Network Security
11Questions 89 -100
Brought to you by RMRoberts.com

This is the last in the series of six tests for a total of 100 CompTIA Network+ questions similar to the actual CompTIA Test. You now have a complete practice test for the CompTIA Network+ brought to you by www.RMRoberts.com. Be sure to complete the Study Guide before attempting the practice test. The Study Guide for this test is located at (link here) or go to our website and view all the study guides and practice tests in the series.

89. Which protocol is used to encapsulate another protocol providing a secure tunnel between two clients?

A. UDP
B. L2TP
C. NTP
D. PAP

90. Who would most likely be responsible for issuing digital certificates insuring the validity of a third party software application?

A. The certificate authority CA.
B. Only Microsoft
C. The Internet Task Force ITF.
D. Your Internet service provider.

91. Where would you locate the default administrator name and password for a particular wireless access point designed for home office use?

A. On the back of the access point.
B. At the manufacturers' website.
C. You will receive an assigned administrator name and password from your Internet service provider.
D. There is no default administrator name or password when first installed.

92. Which is not a tunneling protocol or method?

A. L2TP
B. PPTP
C. VPN
D. PPP

93. What does the acronym IDS represent?

A. Identity Detection System
B. Individual Dynamic Service
C. Integrated Design System
D. Intrusion Detection System

94. Which security term is used to identify an email attachment that is not what it appears to be? For example, an email attachment that has a jpeg extension but is not a photo but rather a program to gain access to the computer?

A. Man in the middle.
B. Smurf
C. Phishing
D. Trojan horse

95. Which Microsoft tool would you use to see if there has been an attempt to guess a user password?

A. Msconfig
B. Event Viewer
C. Action Center
D. Firewall Status

96. Stateful packet inspection aligns with which two layers of the OSI model?

A. Layer 3 (Network Layer and Layer 4 (Transport Layer).
B. Layer 7 (Application Layer) and Layer 3 (Network Layer)
C. Layer 2 (Data Link Layer) Layer 3 (Network Layer)
D. Layer 4 (Transport Layer) and Layer 5 (Presentation Layer).

97. Which security method is used in conjunction with a PIN?

A. RADIUS
B. TACTACS+
C. Smart card
D. MAC filtering

98. What does the acronym AAA represent?

A. Authentication, Authorization, and Accounting.
B. Accuracy, Authority, and Authorization
C. Action, Assistance, and Association
D. Authentication, Acceptance, and Accurate

99. Which is an example of an Access Control List ACL?

A. SSL
B. MAC filter
C. Kerberos
D. CHAP

100. Which is the correct definition for an asymmetric key?

A. An asymmetric key uses the MAC address to generate keys to encrypt and decrypt data.
B. An asymmetric key uses the same key to encrypt and decrypt data.
C. An asymmetric key uses two different keys to encrypt and decrypt data.
D. An asymmetric key uses 54-bit set of random letters to encrypt and decrypt data.

Answers

89. Which protocol is used to encapsulate another protocol providing a secure tunnel between two clients?
B. L2TP

90. Who would most likely be responsible for issuing a digital certificate insuring the validity of a third party software application?
A. The certificate authority CA.

91. Where would you locate the default administrator name and password for a particular wireless access point designed for home office use?
B. At the manufacturers' website.

92. Which is not a tunneling protocol or method?
D. PPP

93. What does the acronym IDS represent?
D. Intrusion Detection System

94. Which security term is used to identify an email attachment that is not what it appears to be? For example an email attachment that has a jpeg extension but is not a photo but rather a program to gain access to the computer?
D. Trojan horse

95. Which Microsoft tool would you use to see if there has been an attempt to guess a user password?
B. Event Viewer

96. Stateful packet inspection aligns with which two layers of the OSI model?
A. Layer 3 (Network Layer and Layer 4 (Transport Layer).

97. Which security method is used in conjunction with a PIN?
C. Smart card

98. What does the acronym AAA represent?
A. Authentication, Authorization, and Accounting.

99. Which is an example of an Access Control List ACL?
B. MAC filter

100. Which is the correct definition for an asymmetric key?
C. An asymmetric key uses two different keys to encrypt and decrypt data.
